

Additional time for DSS students in online courses

Instructors can easily set a different time length for tests by using the **Team** feature under the **Manage** section of Angel.

Creating a Team

First, create Teams for your course

Go to **Manage**

Under **Course Management**, choose **Teams**

Click on **Add a Team** and provide a name for the team

After you click on **Save**, you will see a list of all the students in the class. Mark the names of the students you would like to place in the team and then click on **Add Selected**. After you have added the names, click on **Done**

Next click on **Exit Teams Editor**

Setting Different Testing Periods for Different Teams

After creating the test or if you have already created the test, go to the test area under **Lessons** and choose **Settings**.

Under the Setting, click on **Access**

Then click on the box for **Selected Teams**.

Click on the underlined name of the specific team, and then you create custom testing times with the “start date” and “end date” for that particular team.
