

## HOW TO CONNECT TO THE GCSC WIRELESSNETWORK (IPAD VERSION)

These instructions assume that you have already filled out a Wireless Access Request form and had your picture ID checked by a member of the library staff. If you have not yet done this, please do so before proceeding any further. Your username and password will be emailed to the email address which you provide with your access request form. Wireless access points are currently located in the library, and the Student Union East cafeteria area.

This document demonstrates the use of iOS's built-in wireless software. Your software may vary slightly in set-up. Your wireless card must support WPA encryption.

**STEP 1:** Activate your wireless device.

**STEP 2:** Tap on the Settings App. The Settings icon looks like:

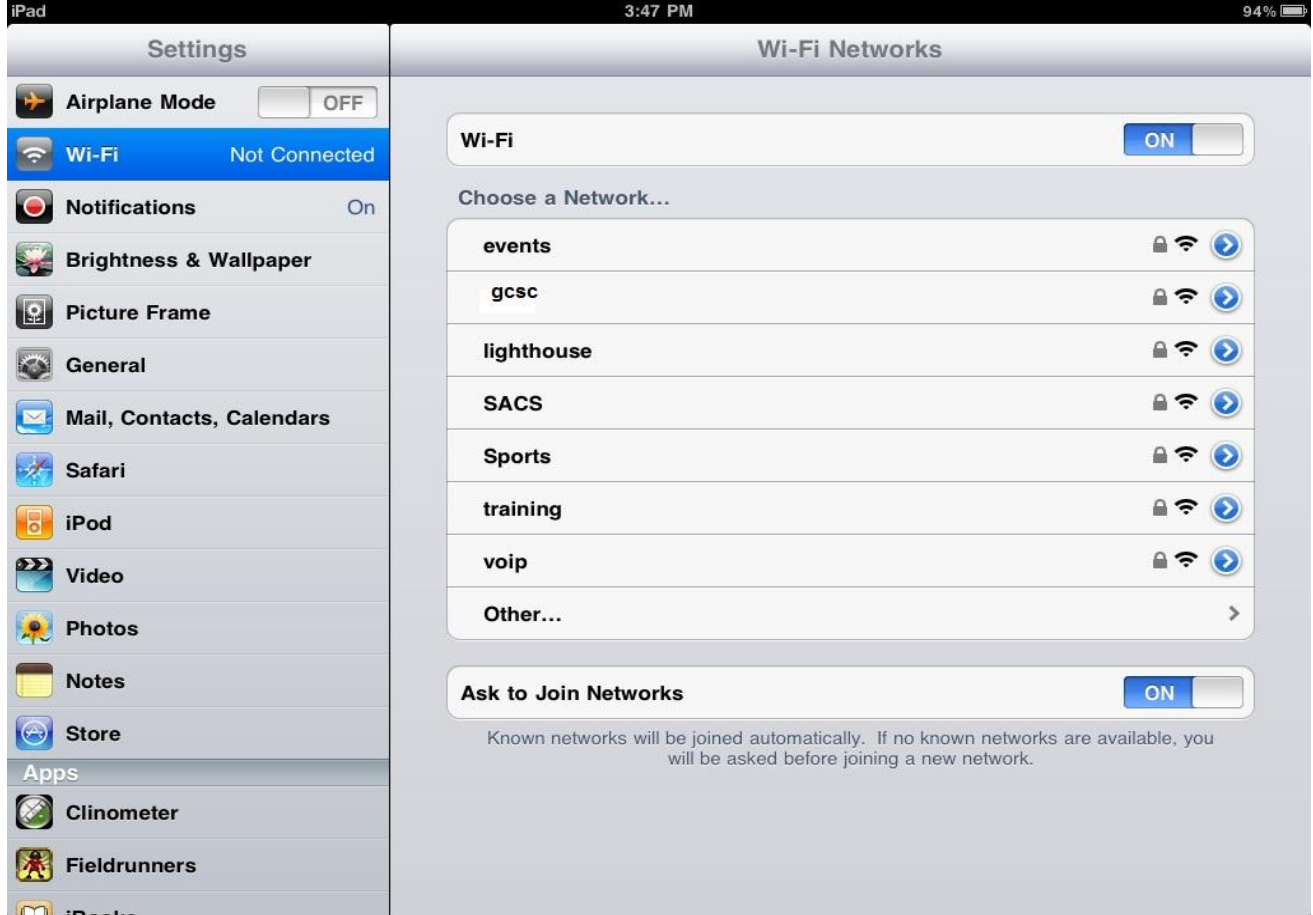

**Settings Icon**

Once in the settings application, you will be at the General Settings screen as shown below.

**General Settings screen**

**STEP 3:** Tap on the **Wi-Fi** category to get to the screen where you will connect to a wireless network as shown below.

**Choose an available wireless network screen**

When you reach this screen, the iPad will start searching for Wi-Fi networks that are in range and that are broadcasting their names. As it discovers available networks it will list them under the Choose a Network... label. Please note that it may take some time for the iPad to see all of the available networks, so please be patient while it searches. You can tell that it is searching as there will be an animated symbol next to the Choose a Network... label while it is searching. If it does not find anything, it will pause for about a minute and then attempt to search again.

When you see the Wi-Fi network that you would like to connect to (gcsc), simply tap on it to attempt to join it. If it has a lock next to the name, then it will require you to enter a "WPA Personal" wireless encryption password (**gcscgcsc**) in order to connect to it as discussed in the next step.

**STEP 4:** Once you Tap on a network name, it will try to connect to it. If the network is not using encryption, then you can just skip to this step. If the network is using wireless encryption, though, you will be presented with a screen asking you to enter the wireless encryption password as shown below

**Enter wireless security password screen**

In the password field, enter the wireless encryption password that is required to join this network (**gcscgcsc**).

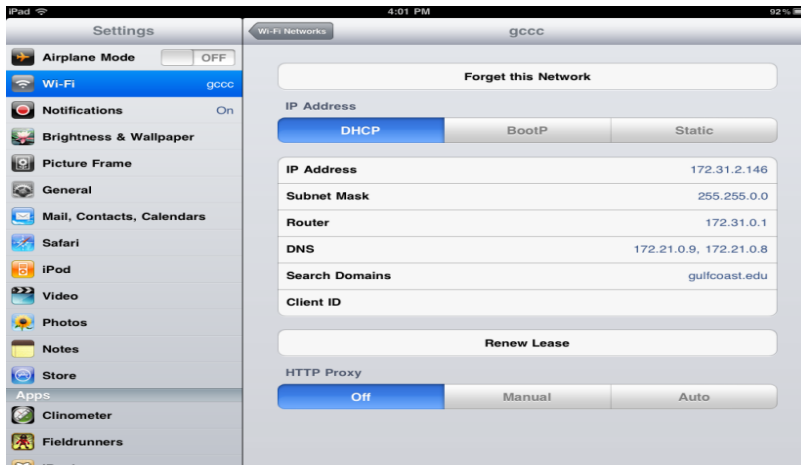

**STEP 5:** The iPad will now attempt to connect to the network, and when finished, will display the Wi-Fi settings screen again, but this time with the joined network listed and with a checkmark next to it as shown below.

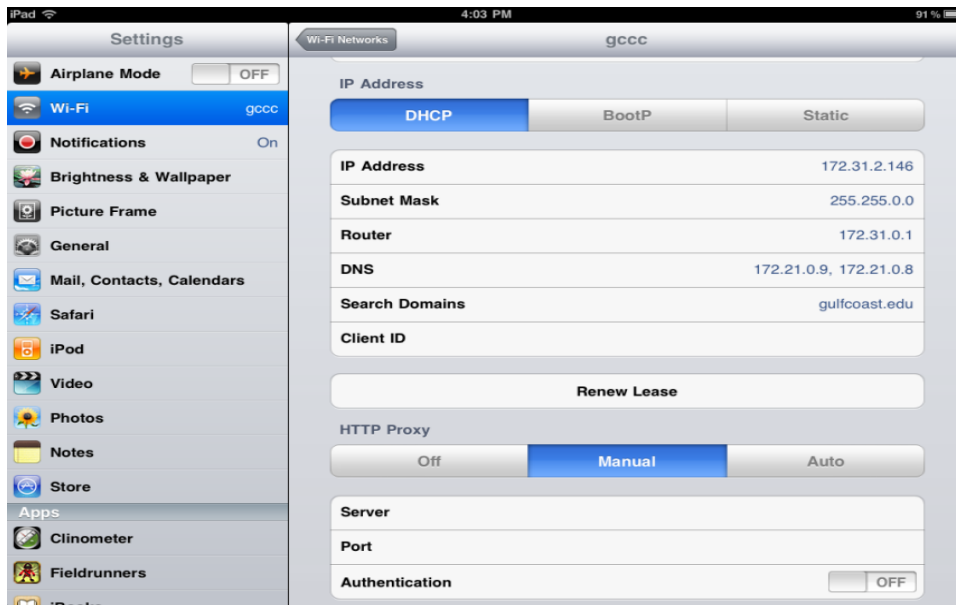

**Screen showing the iPad connected to a wireless network**

The checkmark designates that your iPad is connected to the network. You can also see that your iPad is connected to a wireless network as in the upper left-hand corner you will see the word iPad with the Wi-Fi symbol ( iPad ) next to it.

**STEP 6:** Tap arrow on the right end of the entry of the connected network (gccsc – the one with the checkmark beside it). You will see this screen:

**STEP 7:** At the bottom of the screen, under HTTP Proxy, Tap the Manual button:

**STEP 8:** Enter **150.176.193.141** in the Server field and **8000** in the port field. Switch Authentication to **ON** and enter your wireless access username and password that were emailed to you, into the Username and Password fields:

**STEP 5:** Tap the Home button, then open your web browser, navigate to any page using your web browser.

**NOTE:** You should now have full web access. Please note, you should never share your username or password with anyone or allow anyone to use your connection – you are responsible for anything done using your account. Applications may be obtained at the library circulation desk during normal business hours.

If you have any questions regarding the usage or setup of your account, please call 769-1551, extension 3303 between 8 AM and 4 PM Monday-Friday, excluding holidays.
