

Who We're Looking For: *Software Developer Intern*

Test automation developers (also known as test automation engineers) are software developers who design and write programs that run automatic tests on new or existing software---an essential part of the software development cycle. They use automation frameworks to build these programs on and write test scripts that do the testing.

What You'll Do

- designing and writing test automation scripts
- using test automation frameworks
- investigating problems in software as a result of testing
- executing automated and manual test cases during release testing cycles

Your Experience and Qualifications (*beneficial but not necessary*)

- Understand programming logic
- At least one semester of any programming language
